Dear Linda,

I hope you are doing well.

I have completed the Week 1 data preparation and initial analysis of the Q3 marketing campaign dataset.

Key findings from the analysis include:

• Total Revenue Generated: ₦68,770,000
• Total Advertising Spend: ₦11,495,000
• Total Leads Generated: 8,003, resulting in 1,835 conversions

In addition, channel-level analysis showed that Paid Ads was the highest-performing channel by revenue, generating approximately ₦17,630,000 during the period under review.

Data Quality Observation
During the data cleaning process, several quality issues were identified and resolved, including duplicate records, missing values, inconsistent formatting, and incomplete ROI calculations. Missing ROI values were recalculated, and data validation checks were performed to improve accuracy and consistency.

Recommendation
Based on the initial findings, I recommend further analysis of the Paid Ads channel to understand the factors contributing to its strong revenue performance. Insights from this channel may help optimize budget allocation and improve future campaign results.

The cleaned dataset, summary statistics, data dictionary, and supporting documentation have been completed and are ready for the next phase of analysis and dashboard development.

Kind regards,

Precious Onyedum
