Business Intelligence & Predictive Insights Report

Monthly Trend Analysis

Business Question:

Which month delivered the strongest overall marketing performance?

Business Interpretation

Analysis of Q3 campaign performance revealed that **July was the strongest month**, generating **₦34.44 million** in revenue and recording the highest average ROI (**513.84%**). Performance declined during August and September, with revenue falling to **₦18.04 million** and **₦16.29 million** respectively.

Although average ROI improved slightly in September, both leads and conversions continued to decline throughout the quarter, suggesting reduced customer acquisition despite improved campaign efficiency.

Recommendation

The marketing strategies used in July should be reviewed and replicated where appropriate. Management should also investigate the decline in campaign performance during August and September by evaluating audience targeting, campaign timing, creative content, and budget allocation before Q4.

Correlation Analysis: Ad Spend vs Leads

Business Question:

Does increasing advertising spend reliably generate more leads?

Correlation Coefficient

0.448

Business Interpretation

The correlation coefficient between **Ad Spend and Leads is 0.448**, indicating a **weak positive relationship**. This means that increasing advertising spend tends to generate more leads, but the relationship is not strong. Other factors such as campaign quality, audience targeting, channel selection, and timing are also likely to influence lead generation. Therefore, increasing the advertising budget alone may not consistently produce significantly more leads.

Recommendation

Tech Savvy Solutions should continue investing in advertising but also focus on optimizing campaign targeting, creative content, and channel selection to improve lead generation efficiency.

Campaign Segmentation

Business Question:

Which campaigns should be scaled, optimized, or reviewed based on ROI performance?

Business Interpretation

Campaigns were classified into **High**, **Average**, and **Low Performer** categories using their recalculated ROI. The analysis showed that **20 out of 30 campaigns (67%)** were High Performers, **4 campaigns (13%)** were Average Performers, and **6 campaigns (20%)** were Low Performers.

The large proportion of **High Performers (ROI ≥ 300%)** indicates that the company's marketing strategy is delivering more returns across most campaigns and should receive increased budget allocation in Q4, as they consistently generate strong returns**. Average Performers (ROI 100–299%)** have potential but require optimization through improved targeting or creative strategies. However, the presence of **Low Performers (ROI < 100%)** suggests that some campaigns are not generating sufficient returns and should be reviewed to identify performance issues.

Recommendation

Tech Savvy Solutions should continue investing in High Performer campaigns to maximize revenue growth. Average Performer campaigns should be optimized by improving audience targeting, campaign messaging, and creative content. Low Performer campaigns should be reviewed to identify performance issues, and where improvements are not achievable, their budgets should be reduced or reallocated to higher-performing campaigns.

Revenue Projection

Business Question

Based on Q3 performance, what revenue can Tech Savvy Solutions expect in Q4 if current trends continue?

Assumption

This projection assumes that the average monthly growth rate observed during Q3 continues into Q4 and that no significant market, economic, or operational changes occur during the forecast period.

Business Interpretation

Revenue declined consistently throughout Q3, with month-over-month decreases of **47.62%** from July to August and **9.70%** from August to September. Based on the average monthly decline of **28.66%**, projected revenue is expected to continue decreasing through October, November, and December if current trends persist. This forecast suggests that without strategic intervention, overall marketing performance may weaken further in Q4.

Recommendation

To reverse the projected decline, Tech Savvy Solutions should increase investment in high-performing campaigns, optimize average-performing campaigns through improved targeting and creative strategies, and review or discontinue low-performing campaigns. Continuous monitoring of campaign performance and budget allocation will be essential to improving revenue growth in Q4.

Competitor Comparison

Business Question

How does Tech Savvy Solutions compare with key competitors across major marketing performance metrics?

Analysis

Average ROI

Tech Savvy Solutions recorded an average ROI of 471.03%, substantially higher than BrandPulse NG (220%) and AdVance Digital (185%). This indicates that the company's marketing campaigns generated significantly stronger returns on advertising investment than its competitors.

Cost Per Lead

Tech Savvy Solutions achieved the lowest average Cost Per Lead **(₦1,436**), indicating that it acquires leads more cost-effectively than both competitors.

Conversion Rate

With an average conversion rate of **22.93%,** Tech Savvy Solutions converted a higher proportion of leads into customers than both competitors, demonstrating stronger campaign effectiveness.

Revenue

Tech Savvy Solutions generated the highest Q3 revenue (₦68.77 million), significantly outperforming both competitors and demonstrating stronger overall business performance during the quarter.

Channel Performance

Paid Ads was the highest-performing channel for Tech Savvy Solutions, matching BrandPulse NG's leading channel while outperforming AdVance Digital's Social Media strategy.

Overall Conclusion

Tech Savvy Solutions outperformed both benchmark competitors across all key performance metrics. The company achieved the highest average ROI (471.03%), the lowest cost per lead (₦1,436.34), the highest conversion rate (22.93%), and the strongest Q3 revenue (₦68.77 million). These results indicate an efficient marketing strategy that delivers strong returns on investment. To sustain this competitive advantage, the company should continue investing in high-performing Paid Ads campaigns while optimizing average-performing campaigns and reviewing underperforming initiative.
